

Summer camps are over. Children and young adults are back to their homes and the battle for souls is underway. Satan doesn't want these kids to remember what they heard about the love of Jesus and how they felt the Holy Spirit move in their hearts. Our camp leaders in several countries report increased opposition, especially the underground ministries in the "stan" countries of the Middle East. We are grateful for our trained leaders who are willing to risk their lives to run these camps. Thousands of children and teenagers have received Jesus into their lives, and we ask for your prayers as our team leaders do follow-up.

As we write this letter, we are in the last

days of our Mongolia camp. About 1,200 Mongolians meeting in the Gobi Desert under one very big tent, next letter we will give a complete report. This minis our three-year leadership training course in Ulaan Ba (city of Mongolia) with 35 potential pastors and wives blossomed into church planting (30 new churches all goal of 100), sport leagues, leadership training seminars, conferences, men's and women's retreats and camps "God thing," and we praise His name.

Bob will be in Mongolia sometime in September or October to evaluate the past and to plan for the future with our leaders. Your prayers are much appreciated for this amazing mission. Our goal is to reach the whole nation of Mongolia with the gospel.

Report on Sharon: Sharon's doctors are pleased that the medication has been working to shrink the cancer during the first three months of treatment. They are very concerned that there are other new "hot spots" that may or may not be cancer. Sharon has a history of testing for Lupus, though she has never had notable effects of Lupus. So, more testing, more trusting God, and more praising Jesus for many faithful friends who are praying and believing that God is going to do a miracle. Sharon enjoys 85 percent energy and is able to carry on with life and activities. Mornings can bring nausea as a result of the medication, and eating normal portions is difficult. Thank you for your wonderful letters, words of encouragement, and prayers.
